

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Please amend the claims as follows:

1. (Currently amended) A system for locating a mobile unit including:
 - means for transmitting a first signal at a relatively high power;
 - means for transmitting a second signal at a predetermined, relatively low power;
 - means for receiving said first signal;
 - means for determining a first signal strength of said first signal at said means for receiving said first signal;
 - means for determining whether said first signal strength exceeds a relatively low threshold level so as to determine whether service may be provided;
 - means for receiving said second signal;
 - means for determining a second signal strength of said second signal received at ~~received~~ at said means for receiving said second signal;
 - means for determining whether said second signal strength exceeds a relatively high threshold level so as to locate the mobile unit within a known distance of said means for transmitting said second signal.
2. (Previously presented) A system according to Claim 1, wherein said relatively high power is at least 0 dBm.
3. (Previously presented) A system according to Claim 1, wherein said relatively high power is at least 6 dBm, 13 dBm or 20 dBm.
4. (Previously presented) A system according to Claim 1, said relatively low power is no more than 0 dBm.

5. (Previously presented) A system according to Claim 1, wherein said relatively low threshold level is no more than -85 dBm.
6. (Previously presented) A system according to Claim 1, wherein said relatively high threshold level is no less than -65 dBm.
7. (Previously presented) A system according to any Claim 1, wherein said means for transmitting said first and second signals transmit said first and second signals at different times.
8. (Previously presented) A system according to Claim 1, which is a wireless local area network.
9. (Previously presented) A system according to Claim 8, wherein said means for transmitting said first signal is an access point.
10. (Previously presented) A system according to Claim 8, wherein said means for transmitting said second signal is an access point.
11. (Previously presented) A system according to Claim 8, wherein said means (4) for receiving said first signal is a mobile unit.
12. (Previously presented) A system according to Claim 8, wherein said means (4) for receiving said second signal is a mobile unit.
13. (Previously presented) A system according to Claim 8, wherein said means for transmitting said first signal is a mobile unit.
14. (Previously presented) A system according to Claim 8, wherein said means (4) for transmitting said second signal is a mobile unit.

15. (Previously presented) A system according to Claim 8, wherein said means for receiving said first signal is an access point.
16. (Previously presented) A system according to Claim 8, wherein said means for receiving said second signal is an access point.
17. (Cancelled)
18. (Previously presented) A system for locating a mobile unit including:
 - a first transmitter for transmitting a first signal at a relatively high power;
 - a second transmitter for transmitting a second signal at a predetermined, relatively low power;
 - a first receiver for receiving said first signal;
 - a first detector for determining a first signal strength of said first signal at said first receiver;
 - a first controller for determining whether said first signal strength exceeds a relatively low threshold level so as to determine whether service may be provided;
 - a second receiver for receiving said second signal;
 - a second detector for determining a second signal strength of said second signal at said second receiver;
 - a second controller for determining whether said second signal strength exceeds a relatively high threshold level so as to locate the mobile unit within a known distance of said means for transmitting said second signal.
19. (Previously presented) An access point configured for use in the system according to Claim 1.
